INTRODUCTION

History and Background

The Washington State Child Care Resource & Referral Network (CCR&R Network) is a statewide 501(c)(3) membership organization created in 1989 to implement a strong community-based network for delivering local child care resource and referral (CCR&R) services to families and caregivers throughout Washington. In 1985, the Governor's Task Force on Child Care recommended the creation of community-based child care resource and referral (CCR&R) services in Washington. In 1986 the recommendation was put into statute (RCW 74.13.0903).

Organizational Structure

In 1987, five organizations in local communities received federal planning grants to develop CCR&R programs. From an initial five programs, the CCR&R Network grew to 18 local CCR&Rs serving the entire state population. In 2005 the CCR&R in partnership with the State and private funders embarked on a system-wide transformation process intended to streamline and ensure equitable R&R services in every community of the state. This process culminated in August of 2009. The CCR&R Network now serves as a managing network that contracts with 11 local CCR&R programs. The CCR&R Network and local programs collectively employ about 100 staff (55 FTEs) to provide core services statewide. Local CCR&R staff work out of 20 locations across the state, ensuring a community-based presence. A complete list of the CCR&R Network members follows this section.

Mission

The mission of the CCR&R Network is *to support families and caregivers, shape policy, and build communities that promote the learning and development of all children and youth in Washington through a strong statewide network of local child care resource and referral programs.*

To fulfill this mission, the CCR&R Network office:

- Supports locally-based child care resource and referral member programs through providing telephone and onsite technical assistance, facilitating regular sharing of best practices in the field, training CCR&R program staff, writing grants and negotiating contracts, and coordinating and staffing CCR&R Network meetings;
- Collects, analyzes and disseminates data on child care supply and demand, child care rates, demographic trends in child care, and basic community child care needs assessments;
- Staffs a statewide toll-free phone line for anyone seeking referrals or any other information about child care;
- Leverages private and public dollars for the development and statewide replication of a wide variety of family and child care provider programs in the areas of provider training and family support;

- Advocates for quality child care policy and funding at state, regional and federal levels;
- Coordinates efforts with other early childhood and afterschool care organizations in the state through serving on statewide committees and task forces;
- Serves as a voice for families and child care providers on a national level; and
- Works with employers to find solutions for increased quality child care.

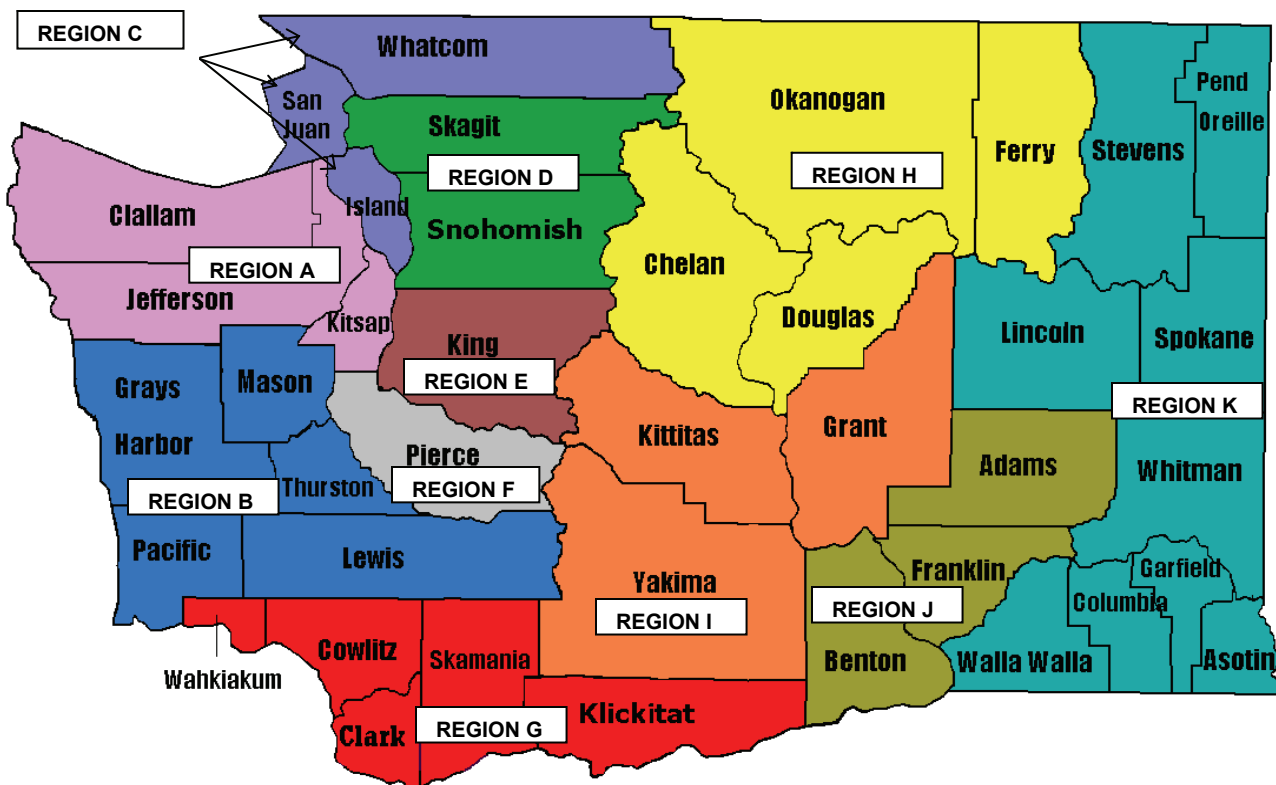

Funding of the CCR&R Network and Local CCR&R Programs

The CCR&R Network is a public/private partnership that receives funding from a variety of sources. In 2010, our funding stream included the federal Child Care Development Block Grant, Washington State Departments of Early Learning (DEL), Health (DOH), and Social and Health Services (DSHS), City of Seattle, corporate and foundation grants, fees for service, membership dues, and individual donations. Similarly, the local CCR&R programs receive funding from the CCR&R Network and local funding sources such as federal and local government grants, United Ways, corporations and charitable organizations and foundations which vary from community to community.

Methodology for this Report

Local CCR&R Network member programs collect data from families and providers in order to provide services. All CCR&Rs use the same proprietary data system and software which includes standardized data fields. CCR&R Network staff monitor the data to ensure quality and consistency, and the data is cleaned to meet CCR&R Network standards before reports are produced.

ABOUT THIS REPORT

The information contained in this report details child care referral statistics that the CCR&R Network gathered in 2010 and comparative statistics for the years 2006 through 2010. Client referral statistics reflect only the number of families that accessed the CCR&R Network's referral services and thus do not represent the state's total child care needs.

Provider statistics include licensed child care facilities in all of the state's 39 counties as of December 2010 but the rate data was calculated for June 30th.

Explanation of Terms:

"Calls and Contacts" or "Calls" are incoming requests (in person, by phone and/or by email) to local CCR&R offices from parents, providers and community members.

"Client" refers to parents, guardians, foster parents and family members who contact CCR&R programs for assistance.

"Duplicate Call" or "Duplicate Search" refers to a search performed for a client within 10 months of the original referral search, unless the family has already been counted as a new client in that calendar year.

"Enhanced Referral" is a contracted service with employers and other agencies to provide additional assistance with client's child care search.

"Facilities" refers to licensed family child care (FCC) homes, exempt school-age programs, and/or licensed child care centers.

"Facilities" refers to licensed family child care (FCC) homes, exempt schoolage programs, and/or licensed child care centers.

"Internet Searches" are child-care searches done by clients without assistance from agency counselors. These are the total number times (daily) clients used the internet for child-care provider searches.

"Providers" refers to licensed family child care (FCC) homes, exempt school-age programs, and/or licensed center child care facilities.

"Provider Technical Assistance" refers to child care provider requests for information and assistance from CCR&R staff. Examples of technical assistance requests include, but are not limited to: what trainings are available and how to access them, questions about developmentally appropriate practice, information on accessing the child care subsidy system, and referrals to other community resources.

“Public Referral Call” or “Referral Search” is the process of providing clients with referrals to licensed child care programs. A referral includes contact and program information that matches parent needs and information about selecting quality care.

“Slots” refers to spaces in a licensed facility (potential capacity, not actual enrollment).

SECTION 1

Annual Child Care Client Activity

January 1 to December 31, 2010

ANALYSIS OF CLIENT TRENDS

NOTE: The analysis presented here is based on data from both Section 1, 2010 Child Care Client Activity and Section 2, Comparison of 2006-2010 Client Activities.

Overview

In contrast to the previous four-year period, the overall demand for child care referrals decreased in 2010. This decline was demonstrated by fewer client contacts in all referral categories except Internet searches which only started in July 2009. This year, 2010, was the first full calendar year that internet searches were available for all Washington residents. The decline in requests from clients may be an indicator of the current economic downturn, but the fact that more families needed referrals may indicate improving economic conditions. Specifically, the CCR&R Network processed 3,796 (19%) fewer public phone referrals, 481 (24%) fewer enhanced phone referrals, and 23,339 (36%) fewer calls for help with other, non-referral, child issues (technical assistance). However, there were 11,691 internet searches this year. (an average of 974 searches a month). (NOTE: It is important to know that the internet referrals do require both initial and ongoing administrative processing.) Overall, counting the internet searches, the CCR&R Network showed a 22% decrease in the number of total referrals (or 20,319 fewer than in 2009). However, using the total number of phone referrals and total internet searches together as an indicator of new demands for child care, the statistics show that 2010 was much closer to the 5-year average (see "2010 Referral Calls Compared with Monthly Averages" chart on pg 2-5). In addition, the number of families and children referred was higher than in 2009 (562 more families, 1,496 more children). However, the number of low-income families and children was slightly less (236 fewer low-income families and 130 fewer children). To summarize 2010, CCR&R Network member programs:

- Answered 70,589 total queries either by counselor or electronically;
- Processed 17,545 phone referral calls;
- Provided referrals for 18,470 families with 26,921 children; and of those,
- Assisted 9,954 known low-income families with 15,565 children find child care.

In 2010, the 684 children with special needs referred represented a decrease of 47 children (6%) from 2009. However, this information was not available from internet clients, which may have slightly affected the decline.

Trend in Ages of Children Referred

Between 2006 and 2010, there was little variation across age categories for the children referred to services. By age group, the average percent of total referrals over the last 5 years were:

- Schoolage (Ages 5+) 31%
- Preschool Age (Ages 3 & 4) 21%
- Toddlers (Ages 1 & 2) 28%
- Infants (Less than 1 year old) 21%

SUMMARY OF 2010 CLIENT DATA

Type of Calls

The local member agencies processed a total of 70,589 calls in 2010, a decrease of 20,319 calls from 2009. This represents a 22% decline. However, the total number of families and children provided referral services this year was greater than 2009. The type of service offered breaks down as follows:

- 16,010 (23%) public child care phone referral searches
- 1,535 (2%) enhanced child care phone referral searches
- 11,691 (5%) internet searches for child care
- 41,353 (59%) technical assistance calls/contacts¹

Compared to 2009, the number of public phone referral calls decreased 19% (by 3,796), while the number of enhanced referral calls decreased 24% (by 481). The number of technical assistance calls/contacts decreased 36% (by 23,339) compared with 2009. Internet searches for child care is a new service that began mid-year (July) in 2009 and therefore is not comparable with the 2010 data.

Families

In 2010, the local CCR&R programs provided referrals for 18,470 families, which was 562 more than last year. This figure includes the 5,093 families doing self-referrals using the internet (28% of families referred).

The following data summarizes responses from the 13,284 families (representing 72% of all families referred) who answered our profile questions. At some agencies, including two of the largest local CCR&Rs, most internet-only clients answered these questions. Characteristics of these families are as follows:

- Low-income families represent over half (54% or 9,954) of all families referred.
- A little less than half (49% or 6,570) are single-parent families.
- A slight majority (51% or 6,714) are two-parent families.

Children

The local CCR&R programs provided referrals for 26,921 children in 2010. This represented 1,496 (6%) more than in the prior year

¹ Under the category of "Technical Assistance Calls/Contacts" the number of families and children are not reported separately. The number of calls and contacts indicate that the services provided by the local CCR&Rs go well beyond their core referral service.

Ages of Children Needing Referrals:

Of those children whose ages were reported (percentages are rounded):

- 20% were infants (less than 1 year of age)
- 29% were toddlers (ages 1 thru 2.5 years)
- 22% were preschoolers (ages 2.6 thru 4 years)
- 29% were school age (ages 5 years and older)

Low-Income and Subsidy Requests

While 54% (9,954) of families receiving referrals were low-income, 58% (15,565) of the children referred by the CCR&R Network qualified for a child care subsidy or requested providers who accept subsidies.

Special Needs

The number of referred children with special needs decreased from 731 in 2009 to 684 in 2010. Despite this numeric decline, about the same proportion (2.5%) of children with special needs were referred.

ADDITIONAL NOTES ON CLIENT DATA

The information in this report presents part of a picture of Washington State's child care demand, specifically, the needs of those families who used CCR&R Network services to find care for their children. *Total demand* would also include those families who find child care without using CCR&R services, families who currently have children in care and families who do not access care. In addition to the limitations of the data, the following comments about the reported child care demand information are important for proper interpretation of the data presented in this report.

TYPE OF CARE REQUESTED

More than one type of care may be acceptable to the client receiving referrals. For example, a parent may ask for both center and family child care options. In this case, both center and family child care requests would be checked in the database and tallied accordingly. All requests are individually counted. Therefore the requests by type of care always add up to more than the number of referral searches.

SECTION 3

Provider Data

Data as of December 31, rates as of June, 2010

ANALYSIS OF PROVIDER TRENDS

Overview

At the end of 2010, the number of operating child care facilities was 7,314, with 174,655 child care slots. Facilities include child care centers, family child care homes, and exempt facilities providing child care. The number of family child care (FCC) providers varies with the economy. As the economy improves, the number of FCC providers typically declines. The converse is also true: as the economy declines, the number of FCC providers often increases. However, the number of overall child care slots usually increases in a strong economy because of growth in the number of child care centers – and relatively small growth in the number of child care centers yields a relatively large growth in the number of slots.

Compared to 2009, the total number of center facilities decreased by 32, the number of center slots decreased by 514. In 2010, there were 226 fewer FCC facilities and 1,830 fewer slots than in 2009. There were 12 fewer exempt facilities, and 826 fewer slots compared to 2009. **Overall in 2010, there were 270 fewer facilities and 3,170 fewer slots than in 2009.** Compared to 2006, there has been an overall increase of 28 center facilities with 5,026 more center slots and a decline of 237 FCC facilities and loss of 1,855 slots. For family child care, this represents a 4% loss of facilities and a 4% loss of slots – the same trend as noted last year.

The overall decline of FCC facilities has some significant impacts on the range of choices available to parents within the licensed child care system:

1. Child care becomes more expensive overall, since center-based facilities are typically more expensive than FCC facilities;
2. Fewer child care slots are available for nonstandard-hour care;
3. Child care facilities are more concentrated in populated areas and less available in neighborhood locations and rural areas; and
4. There are fewer overall infant slots available for families to access since FCC facilities provide a majority of these slots in the system.

MEDIAN RATES OF CHILD CARE COST

The median rate of child care cost is the mid-point of the child care rates, or fees charged by licensed facilities, for that county. This means that half of the child care facilities in that county charge *the same or more than* the median rate, and the other half of the facilities charge *the same or less than* the median rate. Counties with only a few facilities can show wide fluctuation in median rates from year to year, even decreasing in some cases. Therefore, it is critical to interpret the median rates and the potential variation with this in mind.

Statewide, the median rates for child care center facilities increased across all four age categories:

- 3% for infants;
- 2% for toddlers;
- 4% for preschoolers; and
- 3% for school-age children.

During the prior three years, there have been similar rate increases among center facilities for all four age categories. Between 2008 and 2010, the average rates charged by centers increased yearly by 4% for infants, 3% for toddlers, 4% for preschoolers, and 4% for school-age children.

For family child care facilities (FCC), the median rates charged also increased for infants and preschool children but stayed the same for toddlers and school age:

- 4% for infants;
- 0% for toddlers;
- 1% for preschoolers; and
- 0% for school-age children.

For FCCs the rate increases of the years 2008, 2009 and 2010 averaged 4% for infants, 4% for toddlers, 3% for preschoolers, and 6% for school-age children.

Infant Care

Infant care costs the most among all the age categories. Across the state, the highest median monthly rate, or fee, for infants in center care is in King County, at \$1,259. Clark County had the second highest at \$953. The lowest median monthly rate for infants in center care is in Pend Oreille County, at \$542. Lincoln County has the next lowest median monthly rate for infants, at \$604. Among counties with more than ten centers taking infants, the lowest median monthly rates are \$618 in Chelan County and \$626 in Yakima County. For FCC facilities, King County also has the highest monthly median rate for infant care, at \$868. Snohomish County has the second highest rate at \$780 while Whatcom had the third highest rate at \$758. Among those counties with 50 or more FCC facilities taking infants, the lowest median monthly rate of \$542 at Chelan County.

School-age Care

Using a 20-hour week for school-age care as the standard, the highest median monthly rate for center schoolage care is in Klickitat County, at \$542 per month; the second highest is \$466 in Clark and King slightly behind at \$464. Among those counties with 10

or more centers, Clark is the highest. The lowest median monthly rate for all centers, \$217, is in Adams County. Among those counties with 10 or more centers, Chelan is the lowest, at \$231. Among all FCC facilities, Snohomish County has the highest median monthly rate, at \$412. Whitman County has the second highest rate, at \$390 but among counties with 50 or more FCCs caring for school age, Pierce and Kitsap are the second highest, at \$347. The lowest median monthly rate is in Pend Oreille, at \$195. Okanogan had the second lowest, at \$203. Among counties with 50 or more FCCs, Douglas is the lowest, at \$206.

SUMMARY OF 2010 PROVIDER DATA

At the end of 2010, the CCR&R Network's member agencies reported a total of 7,314 licensed or exempt child care facilities, 270 less than in 2009. This includes licensed centers, licensed or exempt school-age programs, and licensed family child care facilities. The breakdown of these providers is as follows:

- Centers comprised 28% (2,065) of the facilities and 71% (123,508) of the slots.
- Family child care homes comprised 71% (5,187) of the facilities and 27% (46,445) of the slots.
- Exempt programs comprised 1% (62) of the facilities and 3% of the slots (4,702).

Seventy-six percent (76%) of facilities reported accepting schoolage children, 69% accept infants, 83% accept at least one kind of subsidy, and 58% reported having training or experience in the care of children with special needs. For the most part, this data is consistent with prior years, except that in 2010, 1% more facilities report accepting infants and 2% more have special-needs training and/or experience than 2009.

Provider Rates

The *50th percentile/median* and *75th percentile* facility rates are included in this report. The *median rate* (reported on pages 3-33 through 3-37) is that rate at which half of the facilities charge the same or a higher rate and the other half charge the same or a lower rate. This means that half the facilities report either the median rate or lower and the other half report either the median rate or higher. For example, if five centers are sorted by rate from lowest to highest, the rate charged by the third center in the list equals the median rate. It is more accurate to use the median rate than the average rate because averages can be distorted by a few providers who charge either an extremely low or an extremely high rate. This distortion is particularly significant in counties where there are a small number of providers.

Instead of the median rate, the *75th percentile rate* (reported on pages 3-12 through 3-20) is the rate at or below which 75% of the facilities charge. This rate is included because it was, until recently, the federal government's minimum standard for determining the maximum possible amount allowed for a provider supporting an individual child who is receiving a subsidy from the state. Some providers refuse to give their rate information to anyone except their customers. This may also skew the median rates in counties, depending on how many facilities are excluded. On pages 3-21 through 3-30, and 3-33 through 3-36, the report details the percentages of providers from which both the median and 75th percentile rates are

derived to provide context for interpreting the rates. In calculating the percentages, only those facilities that care for children in the specified age group are used. For example, the infant rate is based on a ranking of all facilities that offer infant care. Those facilities that do not offer infant care are excluded from the infant care rate calculations.

GENERAL COMMENTS ON PROVIDER DATA

The information in this provider report represents only licensed centers, family child care homes and exempt facilities that operate child care programs. It does not include other exempt care such as unlicensed preschools or nanny services. However, preschools that are also licensed as centers or family child care (FCC) homes are counted.

The providers counted in this report include some who have either asked that we not refer clients to them, or who did not respond to our survey. In the latter case, we have used licensing information from the Department of Early Learning.² All of the providers whose data is included in the report are operating legally during the time period of the report.

The number of slots reported here represents **total capacity, not total vacancies** of the facilities. The majority of these slots are already filled. The most recent Department of Early Learning Market Rate Survey, *The 2008 Child Care Rate Study: Licensed Child Care in Washington State*, showed an average 16% vacancy rate statewide.³

Subsidies

Because providers often accept more than one subsidy, or payment for child care services from an entity other than the child's family, "Total Unduplicated" represents the slots of (pages 3-12 through 3-20) and percent of providers (page 3-21 through 3-30) that will accept any subsidy.

The numbers reflected on the spreadsheet were derived by adding the capacity of all those facilities that accept each of the listed subsidies. In practice, some providers limit the number of subsidized children they will accept. For example, *The 2008 Child Care Rate Study: Licensed Child Care in Washington State* reported that, of those centers that accepted DSHS-subsidized children, 17% limit the number they will accept.⁴ These centers report that they reserve an average of 16 slots for subsidized children.

Special Needs

The definition of "special needs" represents the number (pages 3-12 through 3-20) and percent (pages 3-21 through 3-30) of providers that have training and/or experience providing care for children with special needs.

² For more information on the Department of Early Learning and child care licensing regulations, go to www.del.wa.gov.

³ This report can be found at http://del.wa.gov/publications/research/docs/LicensedChildCareInWashingtonState_2006.pdf.

⁴ Ibid.

Ages Accepted

Age ranges are reported as:

- Infants (less than 1 year);
- Toddlers (1 to 2 ½ years) (*Note: Because family child care homes have limitations on the number of children under 2 years old they can accept, and centers are limited by an adult to child ratio of 1 to 7 for children between 1 and 2½ years, a true indicator of the number of toddler slots requires the use of "under 2" for FCC and "under 2½" for centers.*);
- Preschool Children (3 and 4 years); and
- School Age Children (over 6 years) (*Note: To get a true reflection of the number slots for school age children, providers who specified their upper age limit as 5 or 6 years were not included, since the vast majority of these do not provide before- and/or after-school care.*)

Estimating a Facility's Infant/Toddler Capacity

While the infant and toddler capacities for nearly all centers in the CCR&R databases were reported, some facilities did not report this information. Therefore, the capacities for centers not known were estimated in the following manner based on trend data: the average percent for center infant slots in metropolitan areas was 10% of its total capacity and 13% for centers in rural areas. For toddlers, it was 22% for centers in metropolitan areas and 29% for centers in rural areas. These percentages are applied to derive an estimate for all those centers that care for infants/toddlers but did not report capacities for those ages.

Number of Slots and Overall Capacity of Licensing Child Care System

The number of slots reported here reflects the "potential" number of slots in each age category. For example, for a facility with a capacity of 5 slots that accepts both preschoolers and schoolage children, 5 slots are added in both the preschool and schoolage categories. Essentially, the facility has the option of taking either age category of child. When the slots of the two groups are added together for this facility, the total number of slots would be 10, even though there are only 5 slots available for families to access. Taking this into consideration, **the actual capacity to serve families for any of the listed age groups will be significantly less than the numbers reported here.** The "slot" number shows the age group's total number of slots only if every potential slot was filled by a child of that age group.

Provider Fees (Rates)

Both the median and the 75th percentile rates are contained in this report. The median rates for each county are reported on pages 3-33 through 3-36. Two new spreadsheets were added in 2009 that show the median rates for centers and FCC homes in comparison to the State's median rate. The 75th percentile rate (the rate at or below which is charged by 75% of the providers) is contained on the spreadsheet on pages 3-12 through 3-20.

Rates are reported on four different age groups: infants (0 to 11 months), toddlers (12 months to 29 months), preschoolers (29 months to 5 years), and school-age children (7 years and older). Further, the rates for these ages are individually reported for child care centers and family child care facilities.

Calculating Provider Rates

Since facilities use different bases for their rates (hourly, daily, weekly, or monthly), a common monthly rate was achieved using the following methods based on the unit in which the provider reports rates:

- **Hourly Rates** are converted first to a weekly rate by multiplying the rate by 45 hours. These derived weekly rates are then multiplied by 52 (weeks) and then divided by 12 (months). For school-age children, the hourly rate is multiplied by 20 (based on a statistical average of 4 hours per day, 5 days a week in care).
- **Daily Rates** are multiplied by 5 (days) for all age groups. These derived weekly rates are then multiplied by 52 (weeks) and then divided by 12 (months).
- **Weekly Rates** are multiplied by 52 (weeks) and then divided by 12 (months).

***NOTES ON SCHOOL-AGE RATES:** The school-age rates shown above do not include kindergarten. Also they indicate the rates for school-age children during the school year and, for providers who use an hourly rate, are based on a 20-hour a week schedule. The rates for school-age children during the summer are approximately the same as for pre-school children.

PROVIDER DISCOUNTS: While some providers give discounts when caring for two or more children from the same family, these are not included in the calculations.

NA indicates no providers serve that age group in the county.

A ZERO RATE WITH A ZERO PERCENT indicates that there were provider(s) taking that age group but no rate was

***NOTES ON SCHOOL-AGE RATES:** The school-age rates shown above do not include kindergarten. Also they indicate the rates for school-age children during the school year and, for providers who use an hourly rate, are based on a 20-hour a week schedule. The rates for school-age children during the summer are approximately the same as for pre-school children.

PROVIDER DISCOUNTS: While some providers give discounts when caring for two or more children from the same family, these are not included in the calculations.

NA indicates no providers serve that age group in the county.

A ZERO RATE WITH A ZERO PERCENT indicates that there were provider(s) taking that age group but no rate was
